

TEACHER GUIDE

Ages 4 - 6, 7 - 9

Math: Multiplication & Division

This activity is a great lesson to do before our 'simple addition' task cards as it's slightly more adult led. Students will look at dividing a group of sticks into equal groups and seeing if there are any left over. It's a great way to introduce multiplication and division to your students in a very visual and practical way.

Teaching directions:

- Give your students an amount of time (1-2 minutes works well) to collect as many sticks as they can.
- Come back together with their sticks and get them to work through the differentiated worksheets.
- You can either let students complete the worksheet individually / in small groups or go through the worksheet as a group or class together.
- As you go through the sheet try to introduce them to vocabulary such as 'divide, division, share, remainder, etc.

MULTIPLICATION STICKS

Collect as many sticks as you can in the time given by your teacher then complete the table below.

Name: _____

WORKSHEET 1
Math:
Multiplication & Division

Number of sticks collected: _____

	How Many In Each Group?	How Many Left Over?
Split your sticks into 2 equal groups.		
Split your sticks into 4 equal groups.		
Split your sticks into 3 equal groups.		
Split your sticks into 5 equal groups.		
Split your sticks into 6 equal groups.
