

# THE EGG DROP

## -- Instructions --

Eddie the explorer is stuck in the North Pole and rapidly running out of food. His favourite food is egg and he has required to get some dropped from a plane to keep him alive. The problem is they only have big tubs and natural materials to package the egg and stop it from smashing.

Your task is to test different natural materials and combinations of natural materials to see what works best at protecting the eggs.

You will only be given the egg for the final test where you will drop your tub with the natural material padding in from high up to simulate dropping it from a plane.

**Can you save Eddie and protect the egg?**
